## 1.2 Concept

The Barthel ADL index is a validated scale used to measure and track patients' activities of daily living (ADL) and indirectly, the extent to which they are dependent on help.

The list comprises 10 variables: bowels, bladder, grooming, toilet use, feeding, transfers (from chair to bed and vice versa), mobility, dressing, climbing stairs and bathing, which are all given a score.

The total score is the sum of the scores of the 10 variables.

## 1.3   Mindmap

## 1.4   Purpose

Gaining insight into the dependence on healthcare for carrying out general daily activities by means of a validated score. This is done in order to adjust the care to meet the needs of the patient if necessary.

## 1.5   Patient Population

## 1.6   Evidence Base

## 1.7   Information Model

| «rootconcept» | BarthelADLIndex | |
|---|---|---|
| Definitie | Root concept of the BarthelADLIndex information model. This root concept contains all data elements of the BarthelADLIndex information model. | |
| Datatype | | |

| DCM::DefinitionCode | SNOMED CT: 273302005 Barthel index (assessment scale) | |
| Opties | | |

| «data» | Bowels | |
|---|---|---|
| Definitie | The bowel function describes the extent of fecal incontinence. The measurement takes the condition as measured in the preceding week. In this scale, the following interpretations are used: • Incontinent: incontinent or enema required. • Accident: max. 1 accident per week. • Continent: continent for the entire week. | |
| Datatype | CO | |

| «data» | Bladder | |
|---|---|---|
| Definitie | The bladder function describes the extent of urinary incontinence. The measurement takes the condition as measured in the preceding week. In this scale, the following interpretations are used: • Incontinent: incontinent or catheter required. • Accident: max. 1 accident per 24 hours. • Continent: continent for the entire week or patients who can attend to their own catheter. | |
| Datatype | CO | |
