1.1 Revision History

Publicatieversie 1.0 (04-09-2017)

Publicatieversie 2.0 (31-12-2017)

Bevat: ZIB-472, ZIB-618.

Publicatieversie 2.1 (06-07-2019)

Bevat: ZIB-781, ZIB-788, ZIB- 792, ZIB-795, ZIB-796, ZIB-797.

1.2 Concept

The prescribed substance is usually medication. However, medical aids and bandages can also be prescribed and supplied via the pharmacy. Food and blood products do not strictly belong in the medication category, but can be prescribed and supplied by a pharmacy as well.

A type of medication can be indicated with a **single code**. That code can be chosen from several possible coding systems (concretely: GPK, PRK, HPK or article numbers). Correct use of these codes in the software systems will sufficiently record the composition of the product used, making a complete product specification unnecessary.

In addition to a primary code, **alternative codes** from other coding systems can also be entered (so that the GPK can be sent along in the event that the patient was registered based on PRK, for example).

Entering multiple ingredients will enable you to display a compound product. If one of the composite parts is liquid, the dosage will be given in milliliters; otherwise it will be given in 'units'.

In that case, the **composition of the medication** can be specified implicitly (with the use of a medication

code) or explicitly, for example by listing the (active) ingredient(s) of the medication.

Magistral prescriptions can be entered as well. This can be done by means of the option listed above to enter coded ingredients and/or by entering the composition and preparation method as free text. This is a partial information model

1.3 Mindmap

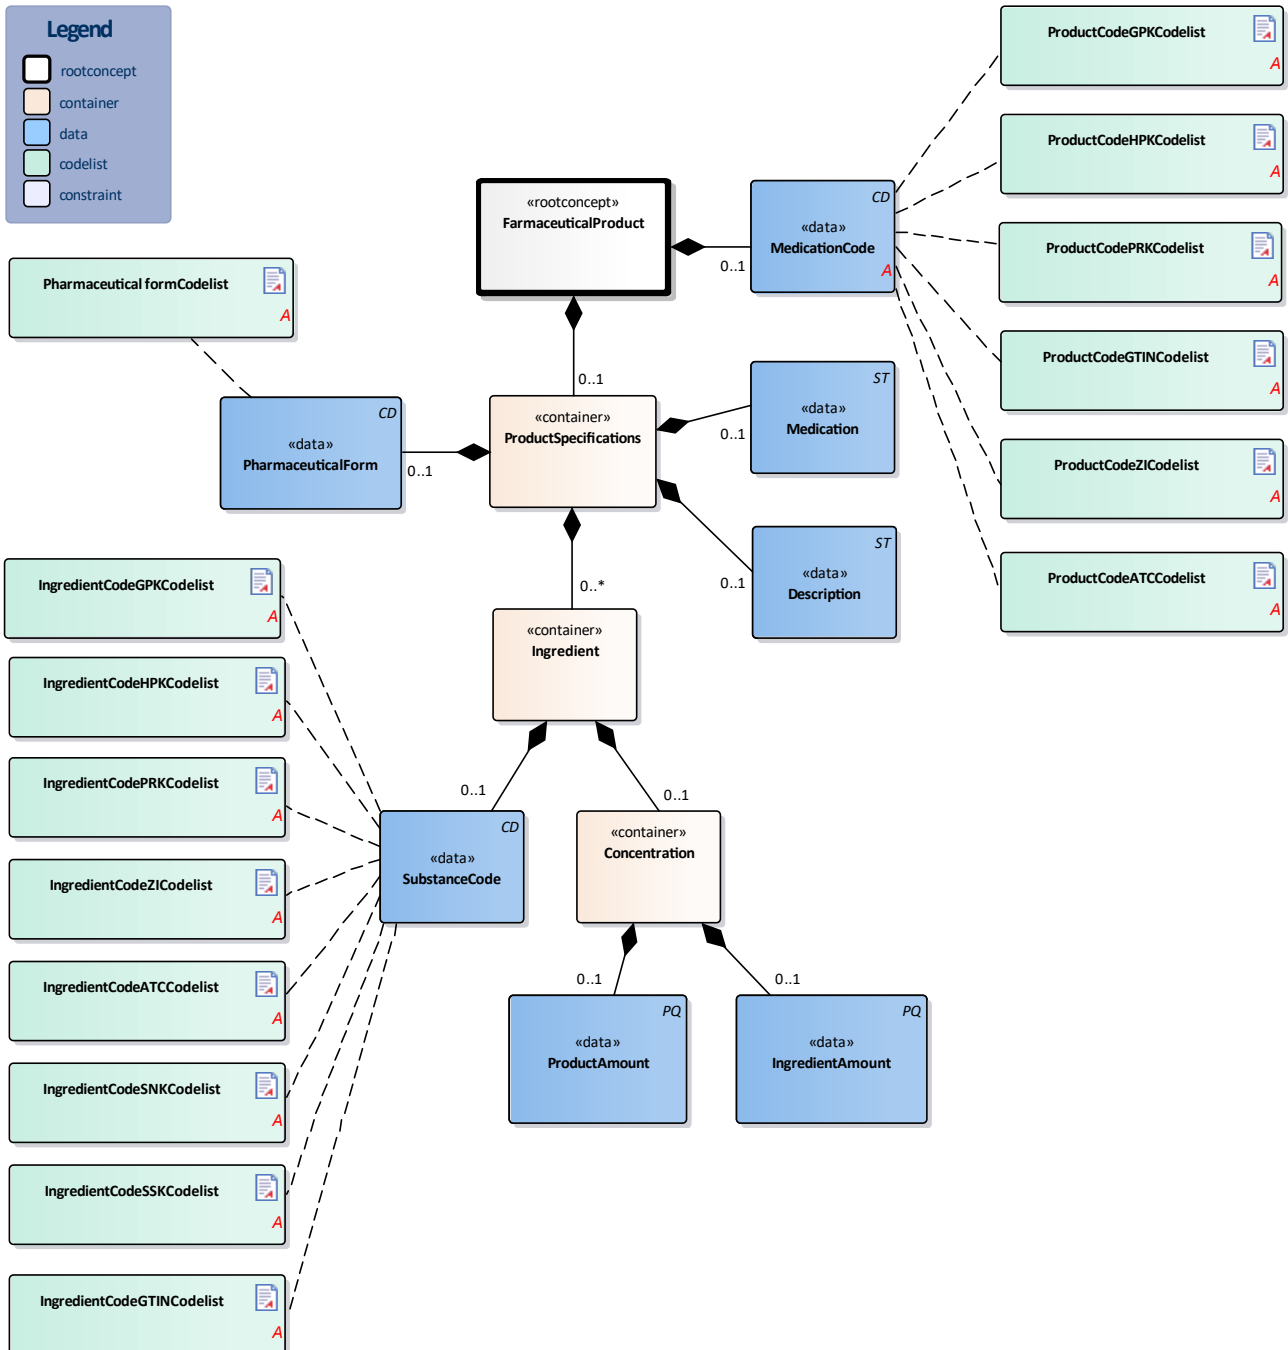

1.4 Purpose

The purpose of Product is to unambiguously describe the medication to be used.

1.5 Patient Population

1.6 Evidence Base

1.7 Information Model

«rootconcept»	FarmaceuticProduct
Definitie	<p>Root concept of the FarmaceuticProduct partial information model. This root concept contains all data elements of the FarmaceuticProduct partial information model.</p> <p>The prescribed product is usually a medicine. However, medical aids and bandages can also be prescribed and supplied via the pharmacy. Strictly speaking, food and blood products do not belong in the medication category, but can be prescribed and supplied by a pharmacy as well.</p> <p>A type of medication can be indicated with a single code. That code can be chosen from several possible coding systems (concretely: GPK, PRK, HPK or article numbers). Correct use of these codes in the software systems will sufficiently record the composition of the product used, making a complete product specification unnecessary.</p> <p>In addition to a primary code, alternative codes from other coding systems</p>

	<p>can also be entered (so that the GPK can be sent along in the event that the patient was registered based on PRK, for example).</p> <p>Entering multiple ingredients will enable you to display a compound product.</p> <p>In that case, the composition of the medication can be specified implicitly (with the use of a medication code) or explicitly, for example by listing the (active) substance(s) of the medication.</p> <p>Prescriptions to be prepared by the pharmacy can be entered as well. This can be done by means of the option listed above to enter coded ingredients and/or by entering the composition and preparation method as free text.</p>

DCM::ConceptId	NL-CM:9.7.19926
Opties	

«data»	MedicationCode
Definitie	<p>Coding medication in the Netherlands is done on the basis of the G standard (issued by Z-index), which is filled under the direction of KNMP.</p> <p>The coded medication can be expressed as:</p> <ul style="list-style-type: none"> • GTIN International Article Number • ZI-nummer (2.16.840.1.113883.2.4.4.8) • Trade product code (HPK) • Prescription code (PRK) • Generic product code (GPK) • Anatomic Therapeutic Classification code (ATC) • Substance Name Code (SNK) • Substance Name Code, in combination with Route of Administration (SSK) • SNOMED CT code <p>The GTIN enables identification of the product including its origin with a barcode.</p> <p>The ZI number represents the tradeproduct and the package size.</p> <p>The HPK is the code for the trade product (with the brand name) as used per dose/per time the medication is taken (1 pill, 1 puff, 1ml)</p> <p>The PRK contains als GPK information supplemented with information needed to prescribe the right product. this level is intended to facilitate generic prescription of drugs.</p> <p>The GPK defines the pharmaceutical characteristics of a product: ingredients, strengths, units, pharmaceutical form and route of administration.</p> <p>The Substance Name Code (SNK) is the (active) compound.</p> <p>Further information about the G-Standaard levels see https://www.z-index.nl</p> <p>So called 90.000.000 numbers are used in local IT systems. These numbers shall not be used for external communication. In the this is necessary only the description (not the code) may be included. This is in accordance with national agreements (Nictiz Standard).</p>

Opties		

«container»	ProductSpecifications	
Definitie	<p>Container of the ProductSpecifications concept. This container contains all data elements of the ProductSpecifications concept.</p> <p>Product specifications are required if the product code is not sufficient to ascertain the active substances and strength.</p>	
Datatype		
DCM::ConceptId	NL-CM:9.7.19928	
Opties		

«data»	PharmaceuticalForm	
Definitie	<p>The pharmaceutical form indicates the form of the medication. Examples include: tablet, suppository, infusion liquid, ointment. If the product has a GPK code in the G standard, the form will be known in the G standard. For products without a code (free text, preparation by the pharmacy), the means of administration can be entered.</p>	
Datatype	CD	
DCM::ConceptId	NL-CM:9.7.19931	
DCM::ExampleValue	230 (TABLET)	
DCM::ValueSet	Pharmaceutical formCodelist	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.9.7.8
Opties		

«data»	Medication	
Definitie	<p>There is no code for medication entered in free text. In these cases, enter the complete description.</p>	
Datatype	ST	
DCM::ConceptId	NL-CM:9.7.19929	
DCM::ExampleValue	PARACETAMOL 500MG TABLET	
Opties		

«data»	Description	
Definitie	<p>A textual description of the type of medication (including relevant properties of the composition and preparation method if possible), which is only used if no coded indication from the G Standard is available (magistral preparation).</p>	
Datatype	ST	
DCM::ConceptId	NL-CM:9.7.19784	
Opties		

«container»	Ingredient	
Definitie	<p>Container of the Ingredient concept. This container contains all data elements of the Ingredient concept.</p> <p>A product contains one or more active substances and excipients. These are usually determined by the product code. For medication prepared or compounded by the local pharmacy, each ingredient must be entered separately.</p> <p>The active substances play an important role, as they:</p> <p>a) determine the pharmacotherapeutic effect of the medication and b) serve as the basis for the indication of the strength of the medication (e.g. 200mg).</p>	
Datatype		
DCM::ConceptId	NL-CM:9.7.19932	
DCM::ExampleValue	captopril	
Opties		

«data»	SubstanceCode	
Definitie	<p>Active substance or excipient.</p> <p>Here, the same codes can be used as for the ProductCode (for dilutions and compounds in particular), but now, the ATC, SSK and SNK codes can also be used to indicate a substance (to list ingredients of local products prepared by the pharmacy).</p> <ul style="list-style-type: none"> • GTIN International Article Number • KNMP article number • Trade product code (HPK) • Prescription code (PRK) • Generic product code (GPK) • ATC (anatomic therapeutic classification) • SSK (substance name code with route of administration) • SNK (substance name code) <p>The ATC is an international classification of pharmaceutical substances without a reference to specific products on the market. Therefore, the ATC code of a generic product will not contain a reference to a certain dose, pharmaceutical form or route of administration; it will only contain a reference to the ingredients (not the amount/concentration/strength).</p>

DCM::ValueSet	IngredientCodePRKCodelist	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.9.7.11
Opties		

«container»	Concentration	
Definitie	The relative amount of this ingredient in this product. Calculation of Concentration = Ingredient Amount ÷ Product Amount. This could be a concentration if the medication is dissolved in liquid, for example.	
Datatype		
DCM::ConceptId	NL-CM:9.7.19933	
DCM::ExampleValue	25mg/stuk of 50IE/ml of 200mg/500ml	
Opties		

«data»	IngredientAmount	
Definitie	The amount and unit of this ingredient. This is the numerator for the calculation of the concentration. The unit should be selected from the G-Standard (Table 902).	
Datatype	PQ	
DCM::ConceptId	NL-CM:9.7.22277	
DCM::ExampleValue	5 ml 20 mg	
Opties		

«data»	ProductAmount	
Definitie	Amount of the product. This is the denominator for the calculation of the concentration. Optionally a translation to NHG table Gebruiksvoorschriften (Table 25) is also allowed.	
Datatype	PQ	
DCM::ConceptId	NL-CM:9.7.22278
