1.2 Concept

A health professional is a person who is authorized to perform actions in the field of individual healthcare.

1.3 Mindmap

1.4 Purpose

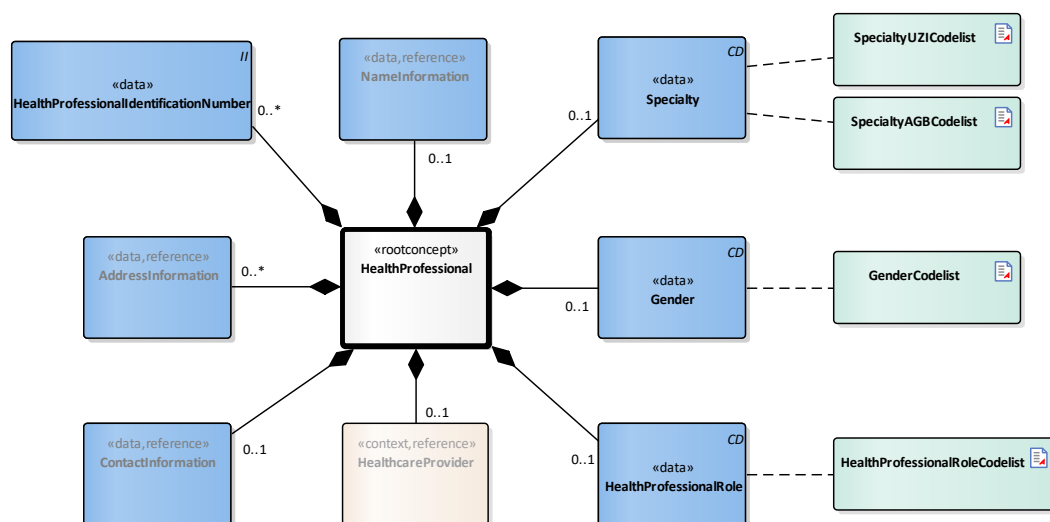

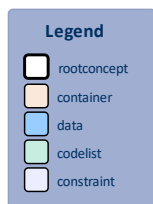

The purpose of this information model is documenting the identity of people providing healthcare. For health professionals, information must be sufficiently complete for reference and auditing: if known, the name is mandatory. If an identification number is given such as a UZI or AGB number, the name and number have to match.

1.5 Patient Population

1.6 Evidence Base

Other employees working in healthcare can also be mapped onto this HCIM. If needed the HealthProfessionalRole can be used to specify the type of healthcareworker by using the nullflavor OTH in free text.

1.7 Information Model

«rootconcept»	HealthProfessional	
Definitie	Root concept of the HealthProfessional information model. This root concept contains all data elements of the HealthProfessional information model. When referring to this information model the role the health professional fulfils in the healthcare process can be addressed additionally. For health professionals, this could be for example main practitioner or referrer.

1.9 Instructions

The concept HealthProfessionalRole can be expressed in two ways, as an element in the information model and as the definition code of a reference in another referring information model (Performer::HealthProfessional). In both cases, the code is taken from the same code list. If both possibilities are used, they should not be in conflict.
