## 1.2 Concept

During breathing or respiration, air flows to and from the lungs, where gas exchange occurs, absorbing oxygen from the air into the blood and exhaling carbon dioxide into the air. Observations of spontaneous breathing, usually registered as part of the observation of vital functions.

## 1.3 Mindmap

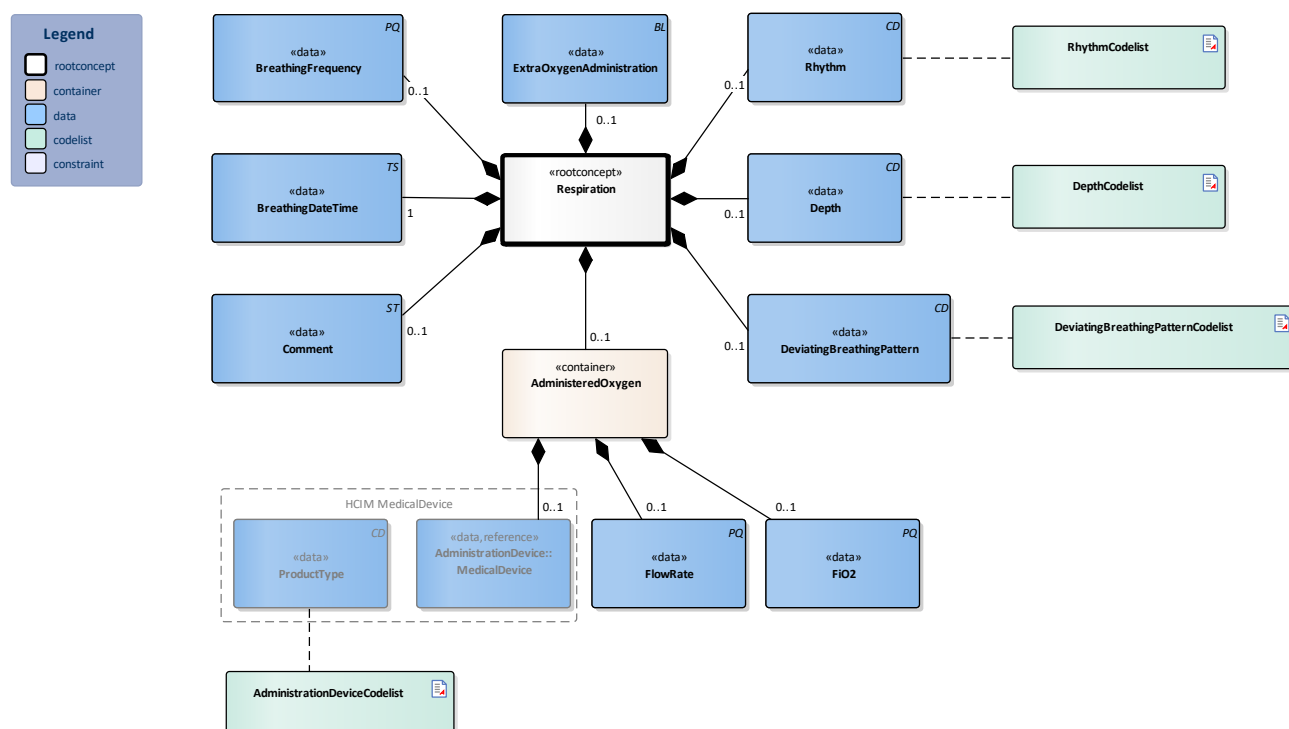

## 1.4 Purpose

Observing a person's spontaneous breathing, including recording breathing frequency, depth and rhythm, is done to gain an indication of the health condition of the patient's pulmonary system.

## 1.5 Patient Population

## 1.6 Evidence Base
