1.1 Revision History

Publicatieversie 1.0 (01-09-2020)

Publicatieversie 1.1 (01-12-2021)

Bevat: ZIB-1248, ZIB-1404, ZIB-1508, ZIB-1567.

1.2 Concept

The Disease Activity Score (DAS) is a combined index developed in Nijmegen around 1990 to measure disease activity in patients with rheumatoid arthritis (RA). It concerns a formula with 28 or 44 painful and swollen joints, a blood value for inflammation (BSE or CRP) and the overall experience of disease activity by the patient. The DAS results in a number between 0 and 10, which indicates how active rheumatoid arthritis is at present. The score has been validated for use in clinical trials in combination with the EULAR response criteria.

1.3 Mindmap

1.4 Purpose

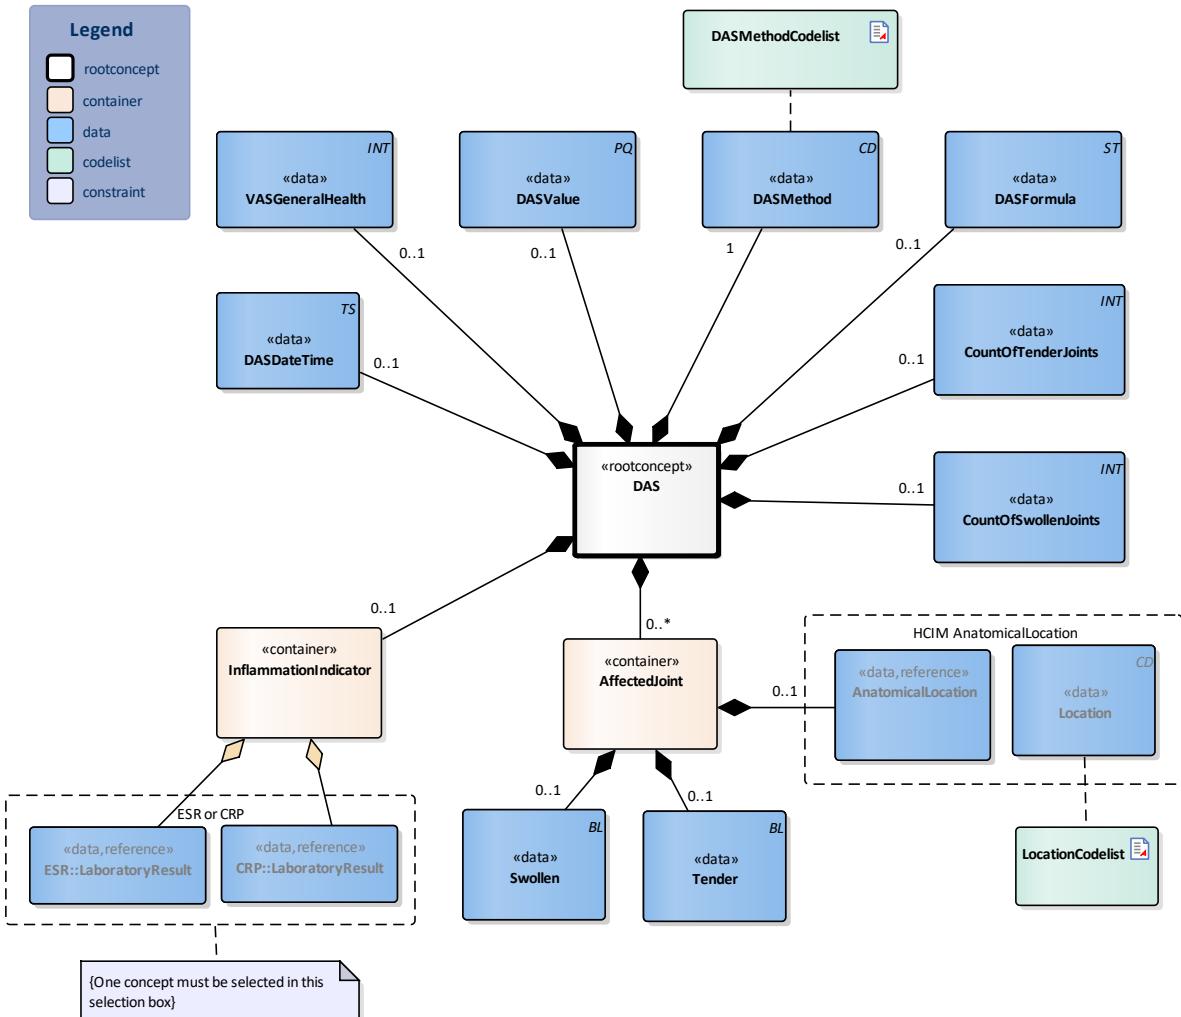

In addition to frequent use in trials, the DAS is used to measure the disease activity of RA patients in daily clinical practice, supporting the "treat-to-target" strategy recommended in guidelines. The DAS is also used as an outcome measure for the care of RA patients in a national quality registration.

1.5 Patient Population

Adult patients with rheumatoid arthritis (RA).
