1.1 Revision History

Publicatieversie 1.0 (01-07-2015)

Publicatieversie 3.0 (01-05-2016)

Bevat: ZIB-453

1.2 Concept

! Attention: this information model is undergoing major revision. A new version will be available after summer.

The ability to keep up one's own dental hygiene is part of self-care. This includes brushing teeth twice a day with fluoride toothpaste and/or cleaning (partial) dentures, cleaning jaws without teeth (edentulous jaws) and taking care of the mucous membrane of the mouth.

Limitations in this ability indicate a reduced ability to cope for oneself.

This activity and activities such as those including eating, getting dressed and bathing are also known as activities of daily living (ADL). These are the activities people go through in daily life. The extent to which a person is able to do all these activities by themselves is a measure for their total ability to do things independently.

(Source: Instruction card for oral hygiene, 2011)

1.3 Mindmap

1.4 Purpose

Problems with oral health can lead to malnutrition or disease: if the patient has difficulty eating, insufficient nutrients are absorbed. A bad set of teeth can also have negative social consequences, such as no longer being able to talk properly, having bad breath or a patient being embarrassed because of their appearance.

Information on limitations in a patient's ability to keep up their own dental hygiene is important in determining the nature and intensity of the care the patient needs. In a transfer situation, it offers the receiving organization the ability to anticipate the intensity of the care to be given to the patient, enabling continuity in healthcare for the patient.

If policy has been implemented to improve a patient's ability to do things independently, the entered extent of independence helps to evaluate the efficiency of the treatment.

1.5 Patient Population

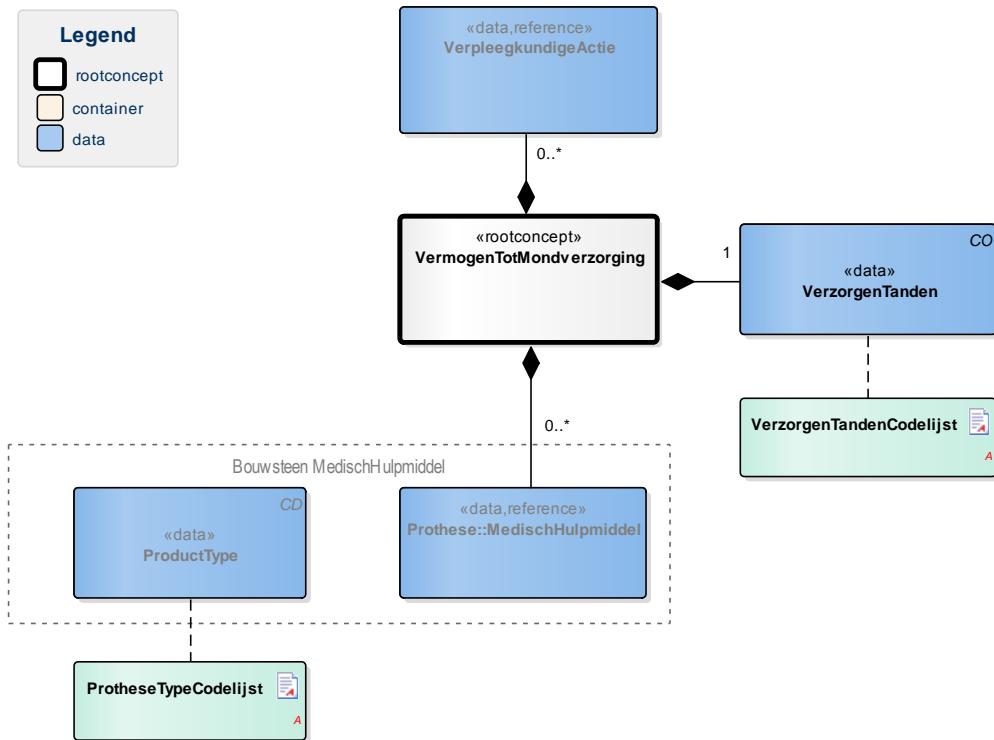

1.6 Evidence Base

The definitions of the concepts were (partially) taken from the ICF definitions.

In addition to this information model, there are more tools for entering the extent of independence, such as the BarthelIndex. The BarthelIndex is mainly used for patients who have had a stroke.

This information model evaluates the ability to keep up their own dental hygiene on a five-point scale. In the BarthelIndex, this falls under the aspect of Grooming. In this tool, the ability is scored on a scale with fewer points.

1.7 Information Model

«rootconcept»	VermogenTotMondverzorging
Definitie	Root concept of the AbilityToKeepUpDentalHygiene information model. This root concept contains all data elements of the AbilityToKeepUpDentalHygiene information model.
Datatype	
DCM::DefinitionCode	NL-CM:4.13.1
Opties	

«data»	VerzorgenTanden
Definitie	Keeping up dental hygiene by brushing teeth, flossing, using interdental brushes and cleaning dental prostheses or orthoses.
Datatype	CO
DCM::DefinitionCode	ICF: d5201 Verzorgen van tanden
DCM::DefinitionCode	NL-CM:4.13.3
DCM::ValueSet	VerzorgenTandenCodelijst
	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.4.13.1
Opties	

«data»	Prothese::MedischHulpmiddel
Definitie	Information on the dental aids used by the patient.
Datatype	
DCM::DefinitionCode	NL-CM:4.13.4

DCM::ReferencedDefinitionCode	NL-CM:10.1.1	This is a reference to concept MedischHulpmiddel in information model MedischHulpmiddel.
Opties		

«data»	ProductType	
Definitie	A specification of the type of medical aids used by the patient, such as a prosthesis or orthosis.	
Datatype	CD	
DCM::DefinitionCode	NL-CM:10.1.3	
DCM::ExampleValue	Dental prosthesis, device	
DCM::ExampleValue	Orthodontic bracket	
DCM::ValueSet	ProtheseTypeCodelijst	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.4.13.2
Opties		

«data»	VerpleegkundigeActie	
Definitie	The nursing procedures needed to help the patient with their dental hygiene.	
Datatype		
DCM::DefinitionCode	NL-CM:4.13.2	
DCM::ExampleValue	Gebit 's nachts uit.	
DCM::ReferencedDefinitionCode	NL-CM:14.2.9	This is a reference to concept VerpleegkundigeActie in information model VerpleegkundigeInterventie.
Opties

1.16 Functional Model

1.17 Traceability to other Standards

1.18 Disclaimer

This Health and Care Information Model (a.k.a Clinical Building Block) has been made in collaboration with several different parties in healthcare. These parties asked Nictiz to manage good maintenance and development of the information models. Hereafter, these parties and Nictiz are referred to as the collaborating parties. The collaborating parties paid utmost attention to the reliability and topicality of the data in these Health and Care Information Models. Omissions and inaccuracies may however occur. The collaborating parties are not liable for any damages resulting from omissions or inaccuracies in the information provided, nor are they liable for damages resulting from problems caused by or inherent to distributing information on the internet, such as malfunctions, interruptions, errors or delays in information or services provided by the parties to you or by you to the parties via a website or via e-mail, or any other digital means. The collaborating parties will also not accept liability for any damages resulting from the use of data, advice or ideas provided by or on behalf of the parties by means of this Health and Care Information Model. The parties will not accept any liability for the content of information in this Health and Care Information Model to which or from which a hyperlink is referred. In the event of contradictions in mentioned Health and Care Information Model documents and files, the most recent and highest version of the listed order in the revisions will indicate the priority of the documents in question. If information included in the digital version of this Health and Care Information Model is also distributed in writing, the written version will be leading in case of textual differences. This will apply if both have the same version number and date. A definitive version has priority over a draft version. A revised version has priority over previous versions.
