1.2 Concept

The pain score is a general measurement for pain experience, not a description of specific, localized pain.

The following are used as an easily reproducible measurement for pain experience:

1. NRS (Numeric Rating Scale) in which the patient gives the pain a number on a scale of 1 (no pain) to 10 (unbearable pain).
2. VAS (Visual Analogue Score), in which the patient points to a bar with a line to indicate the pain they feel. The back of the bar has a scale from 0 (no pain) to 10 (unbearable pain) on it.

The results of both scores have the same meaning, but the visual analogue method (VAS) is seen as more reliable than the NRS pain score.

1.3 Mindmap

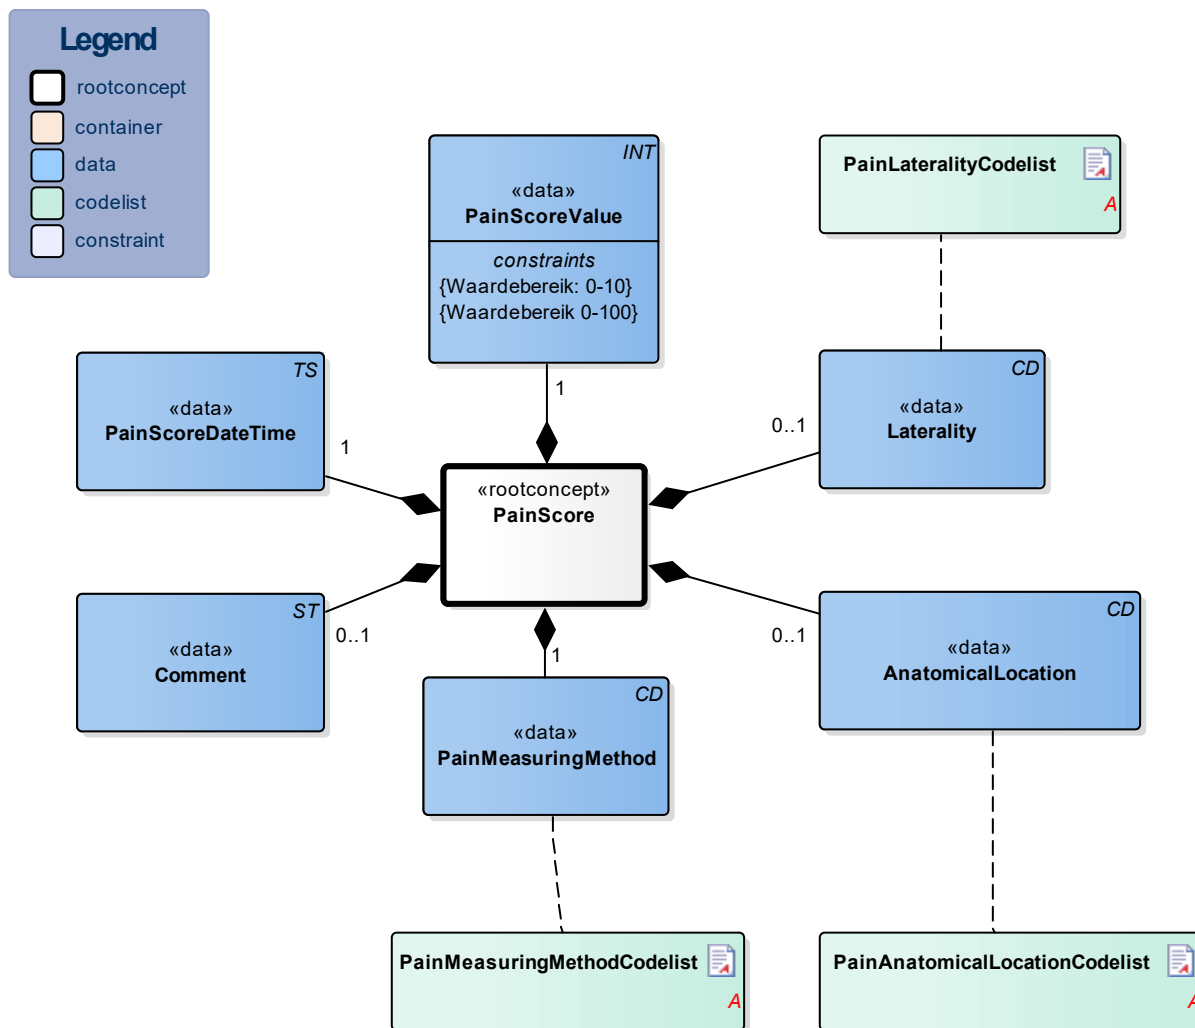

1.4 Purpose

The purpose of the pain score is to quantify and objectify the patient's subjective pain experience.

1.7 Information Model

«rootconcept»	PainScore
Definitie	Root concept of the PainScore information model. This root concept contains all data elements of the PainScore information model.
Datatype	
DCM::ConceptId	NL-CM:12.9.1
Opties	

«data»	PainScoreValue
Definitie	<p>The score is a general measurement of pain experience, not a description of specific, localized pain.</p> <p>Depending on the measuring method used, it indicates the level of pain experienced by the patient on a scale of 0 to 10: 0 = no pain and 10 = the worst pain imaginable. No descriptions are used for the intermediate values, so that the value is displayed as a number and not as a code.</p> <p>Sometimes a value range of 0-100 is used instead of 0-10.</p>
Datatype	INT

«data»	PainScoreDateTime	
Definitie	The date and time at which the pain score was measured.	
Datatype	TS	
DCM::ConceptId	NL-CM:12.9.3	
Opties		

«data»	PainMeasuringMethod	
Definitie	The measuring method describes the method used to determine the pain score. The measurement involves a visualization of the pain scale.

This Health and Care Information Model (a.k.a Clinical Building Block) has been made in collaboration with several different parties in healthcare. These parties asked Nictiz to manage good maintenance and development of the information models. Hereafter, these parties and Nictiz are referred to as the collaborating parties. The collaborating parties paid utmost attention to the reliability and topicality of the data in these Health and Care Information Models. Omissions and inaccuracies may however occur. The collaborating parties are not liable for any damages resulting from omissions or inaccuracies in the information provided, nor are they liable for damages resulting from problems caused by or inherent to distributing information on the internet, such as malfunctions, interruptions, errors or delays in information or services provide by the parties to you or by you to the parties via a website or via e-mail, or any other digital means. The collaborating parties will also not accept liability for any damages resulting from the use of data, advice or ideas provided by or on behalf of the parties by means of this Health and Care Information Model. The parties will not accept any liability for the content of information in this Health and Care Information Model to which or from which a hyperlink is referred. In the event of contradictions in mentioned Health and Care Information Model documents and files, the most recent and highest version of the listed order in the revisions will indicate the priority of the documents in question. If information included in the digital version of this Health and Care Information Model is also distributed in writing, the written version will be leading in case of textual differences. This will apply if both have the same version number and date. A definitive version has priority over a draft version. A revised version has priority over previous versions.
