1.2 Concept

The concept Procedure indicates a therapeutic procedure undergone by the patient. If relevant, diagnostic procedures can be listed as well.

A procedure can be a simple blood pressure measurement, but also a complex heart surgery.

1.3 Mindmap

1.4 Purpose

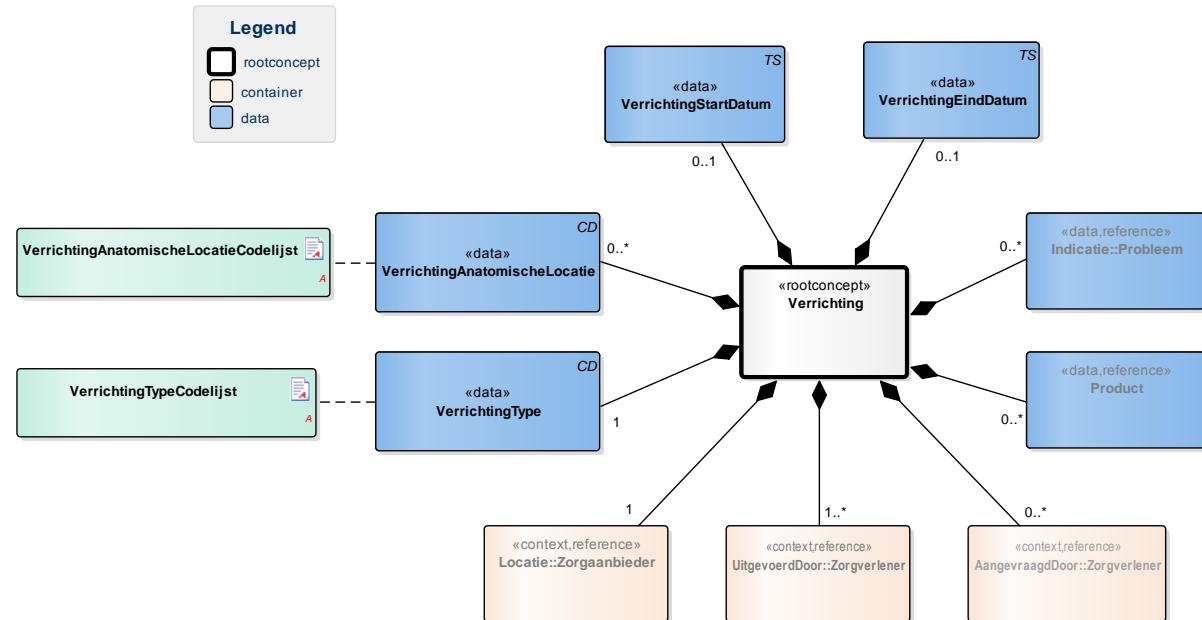

A procedure is carried out as part of a planned policy or to obtain additional information in the diagnostic process. Procedures are documented to gain insight into the treatment of a patient. In addition, procedures are documented for administrative purposes such as invoicing and workload measurement, scientific research and/or education.

1.5 Patient Population

1.6 Evidence Base

Only the procedures are described in this information model, not the results of the procedures. The LaboratoryResultTransfer and TextResultTransfer information models can be used to document the results.
