1.2 Concept

A burn wound is a wound caused by skin being exposed to heat for a certain time above a certain critical temperature. Heat above this critical temperature (+/- 40°C) will cause damage to the skin. There are different types of burn wounds, which are categorized according to the depth of the burn wound.

The depth of the burn wound depends on:

- the temperature of the impacting heat;
- the duration of the impact of heat on the skin;
- the source of the burn (e.g. fire, fluid).

1.3 Mindmap

1.4 Purpose

The description of the burn wound is of importance for starting or continuing the best possible wound treatment and to be able to properly monitor the wound healing process.

1.5 Patient Population

1.6 Evidence Base

Different degrees are used to evaluate the depth of the burn wound:

First-degree burn (no wound):

- no blisters, no open wounds
- redness
- good capillary refill
- supple
- painful

Superficial second-degree burn wound (partial thickness of the skin):

- intact / broken blisters
- pink, shiny, uniform
- good capillary refill
- supple
- painful

Deep second-degree burn wound:

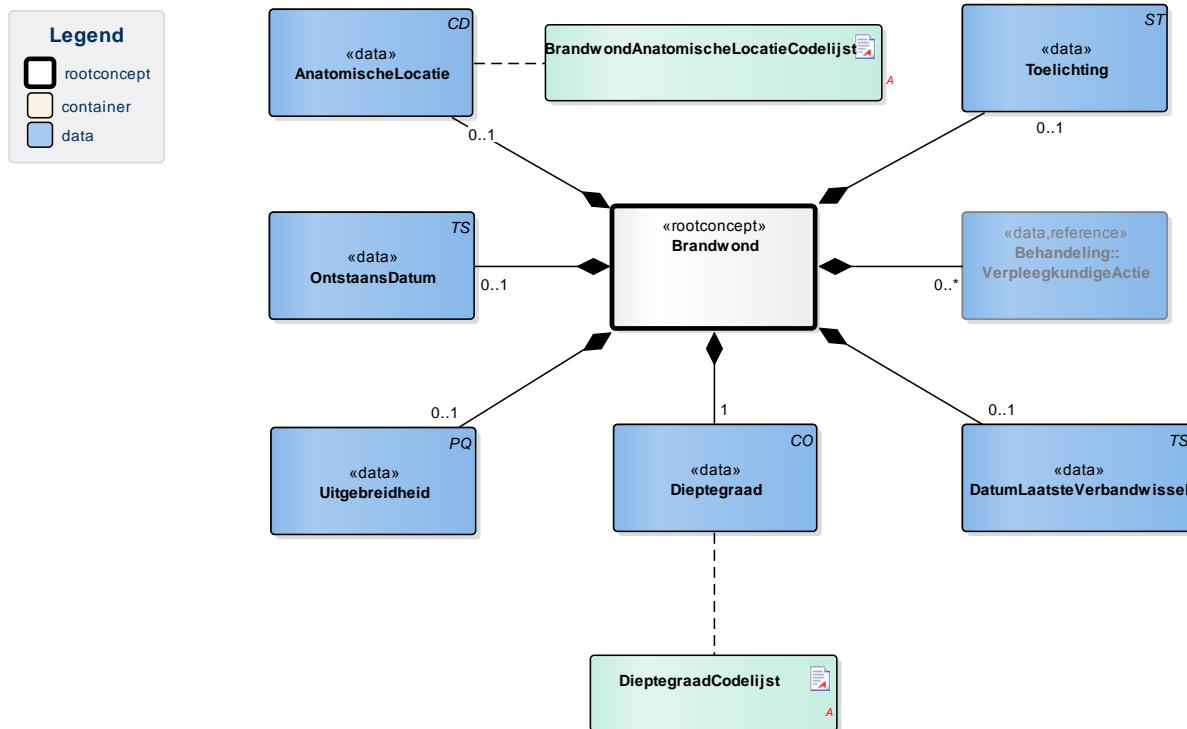

- intact / broken blisters
- pink, matte, not homogenous, damp
- slow capillary refill
- slightly more firm
- painful

Third-degree burn wound

- intact / broken blisters, epidermis stuck to burned dermis
- white, brown, yellow, red (when kept in hot water for a prolonged period of time)
- no capillary refill, non-removable redness
- firm
- less painful than the size of the wound makes it appear

1.7 Information Model

«rootconcept»	Brandwond	
Definitie	Root concept of the BurnWound information model. This concept contains all data elements of the BurnWound information model.	
Datatype		
DCM::DefinitionCode	SNOMED CT: 48333001 Burn	
DCM::DefinitionCode	NL-CM:19.4.1	
Opties		

«data»	Dieptegraad	
Definitie	Description of the severity of the burn wound, ranging from degree 1 - 3.	
Datatype	CO	
DCM::DefinitionCode	NL-CM:19.4.2	
DCM::ExampleValue	2e graads, oppervlakkig	
DCM::ValueSet	DieptegraadCodelijst	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.19.4.1
Opties		

«data»	Uitgebreidheid	
Definitie	The extent of a burn wound is indicated in a percentage of the 'Total Body Surface Area' (TBSA). For adults, the TBSA can be calculated on the basis of the 'rule of nines', in which body parts are expressed in the percentage 9 and multiples of 9. This 'rule of nines' cannot be used for children because a child's body proportions are different from those of an adult. For children, separate tables were developed per age group to determine the extent of burn wounds. Another option is measuring the extent using the	

	patient's hand surface area. The surface area of a patient's hand (including the fingers) equals approximately 1% of their total body surface area. (Source: Brandwonden genezen. Hoe verder? [Healing Burn Wounds. What now?])
Datatype	PQ
DCM::DefinitionCode	NL-CM:19.4.7
DCM::ExampleValue	27%
Opties	

«data»	OntstaansDatum
Definitie	Date on which the burn wound appeared.
Datatype	TS
DCM::DefinitionCode	NL-CM:19.4.3
DCM::ExampleValue	01-07-2014
Opties	

«data»	AnatomischeLocatie	
Definitie	The location of the burn wound on the body.	
Datatype	CD	
DCM::DefinitionCode	NL-CM:19.4.4	
DCM::ExampleValue	Linker bil	
DCM::ValueSet	BrandwondAnatomischeLocatieCodelijst	OID: 2.16.840.1.113883.2.4.3.11.60.40.2.19.4.2
Opties		

«data»	Toelichting
Definitie	Explanation of the burn wound.
Datatype	ST
DCM::DefinitionCode	NL-CM:19.4.5
DCM::DefinitionCode	LOINC: 48767-8 Annotation comment
Opties	

«data»	DatumLaatsteVerbandwissel
Definitie	Date on which the dressing was last changed.
Datatype	TS
DCM::DefinitionCode	NL-CM:19.4.8
DCM::ExampleValue	10-10-2014
Opties	

«data»	Behandeling::VerpleegkundigeActie
Definitie	The procedures carried out to treat the burn wound.

third degree burn injury	80247002	SNOMED CT	2.16.840.1.113883.6.96	3 ^e graad

1.8 Example Instances

Brandwond	
DiepteGraad	2 ^e graad, oppervlakkig
Uitgebreidheid	1%
AnatomischeLocatie	onderarm rechts
OntstaansDatum	29-09-2014
DatumLaatste Verbandwissel	10-10-2014
Behandeling	
Activiteit	Verbinden met hydrofyber verband, dagelijkse wondinspectie, zo nodig verwisselen van niet adherente delen van hydrofyber verband.
Toelichting	Mevrouw kreeg hete thee over zich heen, wond is ongeveer 10 bij 4 cm.

1.9 Instructions

TVLO kinderen TVLO volwassenen

1.10 Interpretation

1.11 Care Process

1.12 Example of the Instrument

1.13 Constraints

1.14 Issues

Damages to the skin as a result of exposure to intense heat and cold can lead to similar wounds. Nevertheless, we have decided not to expand the information model to become a generic thermal wound information model. The reason for this was the lack of a guideline for treating freeze wounds and insufficient agreement in the field on the applicability of the burn wound classification for freeze wounds. Freeze wounds also rarely occur in the Netherlands, due to the climate.

1.16 Functional Model

1.17 Traceability to other Standards

1.18 Disclaimer

This Health and Care Information Model (a.k.a Clinical Building Block) has been made in collaboration with several different parties in healthcare. These parties asked Nictiz to manage good maintenance and development of the information models. Hereafter, these parties and Nictiz are referred to as the collaborating parties. The collaborating parties paid utmost attention to the reliability and topicality of the data in these Health and Care Information Models. Omissions and

inaccuracies may however occur. The collaborating parties are not liable for any damages resulting from omissions or inaccuracies in the information provided, nor are they liable for damages resulting from problems caused by or inherent to distributing information on the internet, such as malfunctions, interruptions, errors or delays in information or services provided by the parties to you or by you to the parties via a website or via e-mail, or any other digital means. The collaborating parties will also not accept liability for any damages resulting from the use of data, advice or ideas provided by or on behalf of the parties by means of this Health and Care Information Model. The parties will not accept any liability for the content of information in this Health and Care Information Model to which or from which a hyperlink is referred. In the event of contradictions in mentioned Health and Care Information Model documents and files, the most recent and highest version of the listed order in the revisions will indicate the priority of the documents in question. If information included in the digital version of this Health and Care Information Model is also distributed in writing, the written version will be leading in case of textual differences. This will apply if both have the same version number and date. A definitive version has priority over a draft version. A revised version has priority over previous versions.
