## 1.2 Concept

Freedom restricting measures are (physical or verbal) measures used to deliberately restrict the freedom of the patient in question.

Many forms of freedom restricting measures fall under this definition, including but not limited to:

- involuntary treatment (e.g. forced medication)
- physical restraints (side rails fully up)
- physical fixation (arm restraints in order to prevent removal of drip)
- electronic surveillance to monitor the whereabouts of the patient.

In hospitals, these often include the use of side rails, a cushion belt (around the waist) or a Posey bed. Often sedatives are administered in combination with the freedom restricting measures. For small children it often

involves fixation of *e.g.* hands to prevent the extraction of a nasogastric tube. The Vereniging Verpleegkundigen & Verzorgenden Nederland (V&VN) [Dutch Nurses and Carers Association] published a set of guidelines for nurses to implement these restraints in hospitals. The 'Wet BOPZ' [Dutch Psychiatric Hospitals (Compulsory Admissions) Act] protects the rights of clients who are involuntarily admitted into mental healthcare, services for the disabled and in geriatric psychiatry. The act only applies to 'BOPZ'-marked facilities and also applies to some (closed) wards in nursing homes. Mental healthcare facilities use a national registration system to register the restraints called Argus registration. Permission of the patient or his/hers legal representative is required before starting freedom restricting measures. The patient's high-risk behavior providing cause for the restraints is not described in this concept.

### 1.3 Mindmap

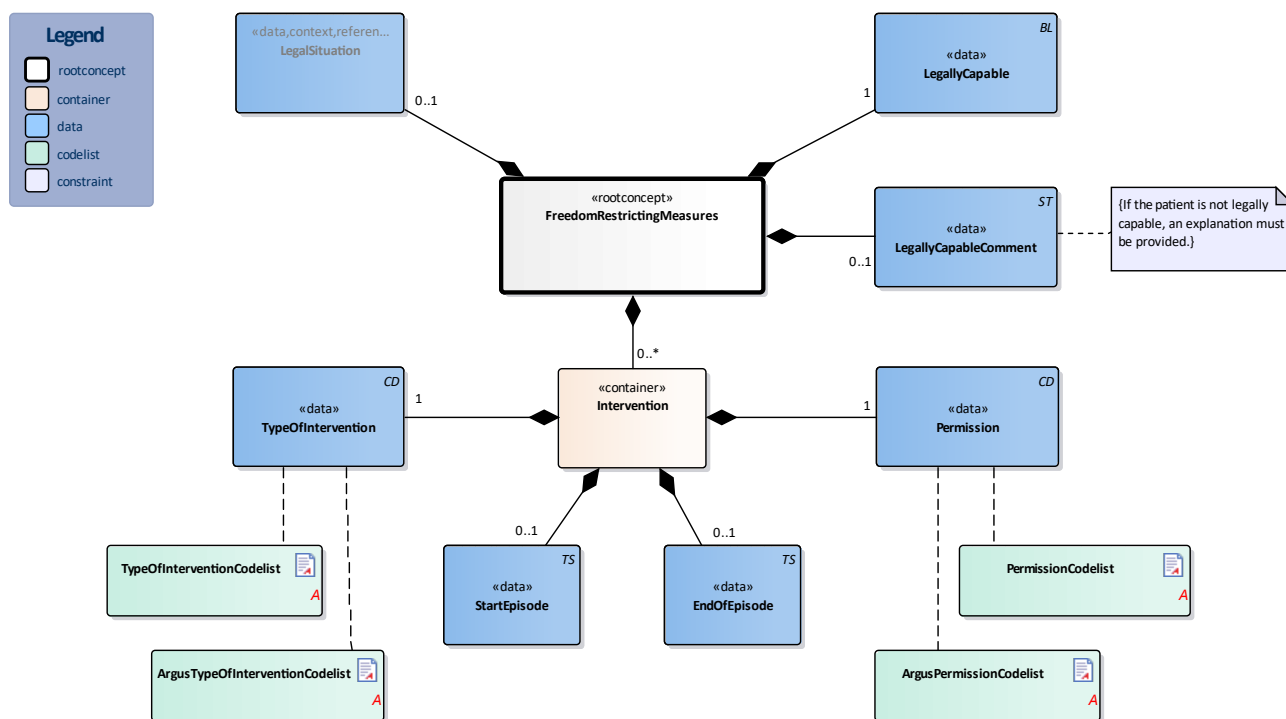

### 1.4 Purpose

Implementing medical restraints is risky and can result in damage to the patient if they are not carefully implemented. Nurses fulfil an important role in identifying risks, observing the effect of the restraints and any changes to the policy in terms of medical restraints. Recording all information on the measures is of major importance for insight into decision-making, implementing, monitoring and evaluating the measures. In the event of a transfer to the next facility, the proper preparations can be taken to safely continue the care and to limit the risks to the patient and their environment.

## 1.9 Instructions

Mental healthcare uses a national registration system (Argus registration) when implementing medical restraints. In this context the codelists ArgusInterventieCodelijst and ArgusInstemmingCodelijst are applicable. In all other cases the codelists SoortInterventieCodelijst en ToestemmingCodelijst shall be used

## 1.18 Disclaimer

The Health and Care Information Models (a.k.a Clinical Building Block) has been made in collaboration with several different parties in healthcare. These parties asked Nictiz to manage good maintenance and development of the information models. Hereafter, these parties and Nictiz are referred to as the collaborating parties. The collaborating parties paid utmost attention to the reliability and topicality of the data in these Health and Care Information Models. Omissions and inaccuracies may however occur. The collaborating parties are not liable for any damages resulting from omissions or inaccuracies in the information provided, nor are they liable for damages resulting from problems caused by or inherent to distributing information on the internet, such as malfunctions, interruptions, errors or delays in information or services provide by the parties to you or by you to the parties via a website or via e-mail, or any other digital means. The collaborating parties will also not accept liability for any damages resulting from the use of data, advice or ideas provided by or on behalf of the parties by means of the Health and Care Information Models. The parties will not accept any liability for the content of information in this Health and Care Information Model to which or from which a hyperlink is referred. In the event of contradictions in mentioned Health and Care Information Model documents and files, the most recent and highest version of the listed order in the revisions will indicate the priority of the documents in question. If information included in the digital version of a Health and Care Information Model is also distributed in writing, the written version will be leading in case of textual differences. This will apply if both have the same version number and date. A definitive version has priority over a draft version. A revised version has priority over previous versions.
