### 1.2 Concept

**! Attention: this information model is undergoing major revision. A new version will be available after summer.**

Hearing is the ability to observe sound, with the purpose of communicating with others, localizing the source of the sound and recognizing certain sounds. This pertains to observing the sound waves, and not processing the sounds in the brain.

A hearing disorder can lead to things including communication problems.

### 1.3 Mindmap

## 1.4 Purpose

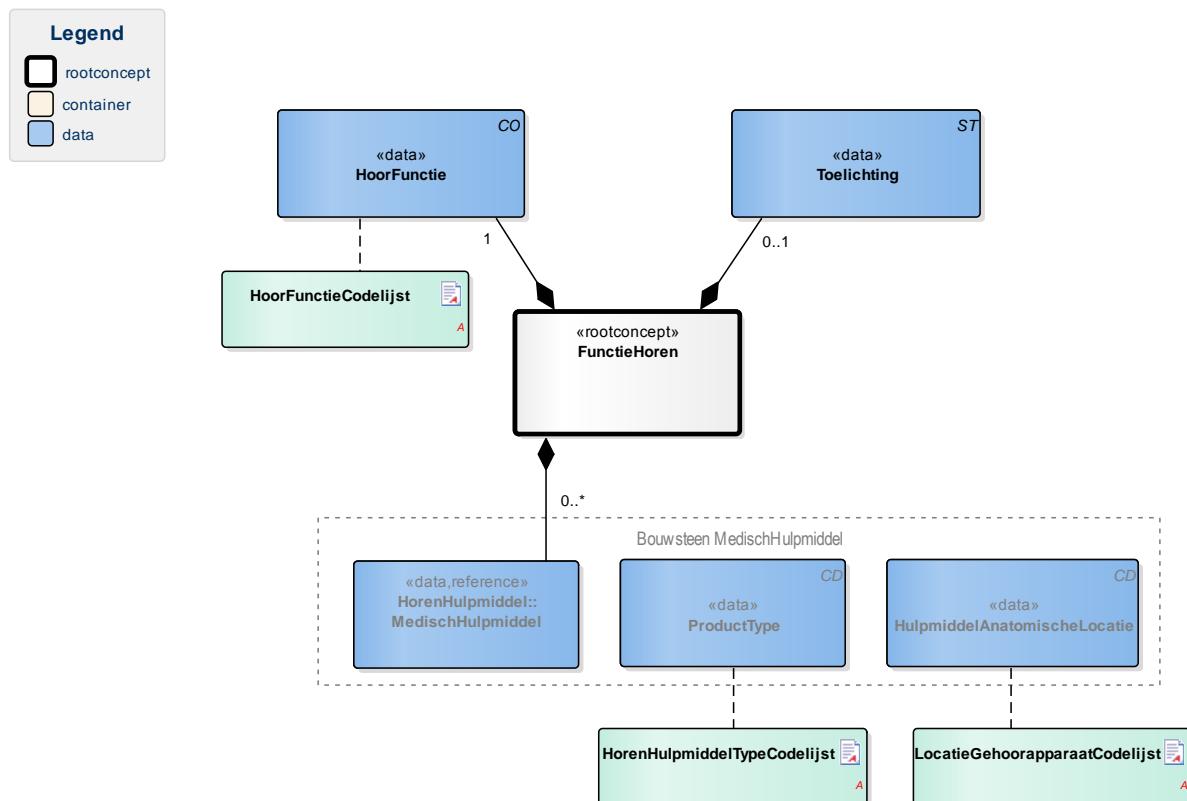

Information on hearing function disorders is important in patient nursing and care and particularly in communication with the patient.

## 1.5 Patient Population

## 1.6 Evidence Base

The definitions of the concepts were (partially) taken from the ICF definitions.
