1.2 Concept

A nursing intervention is the care and/or treatment carried out by a nurse based on an expert opinion and clinical knowledge. It is part of the nursing process; interventions are determined as a result of indexed healthcare problems (nursing diagnoses) and based on treatment goals. The interventions are outlined in the nursing procedures.

1.3 Mindmap

1.4 Purpose

The nursing interventions are an essential part of the nursing process. A nursing intervention is recorded to document the nursing policy and to update other healthcare providers on the intervention. The documentation of nursing interventions offers the option to determine whether the interventions outlined in the treatment plan have been carried out. This way, we can facilitate optimal nursing and continuity of care.

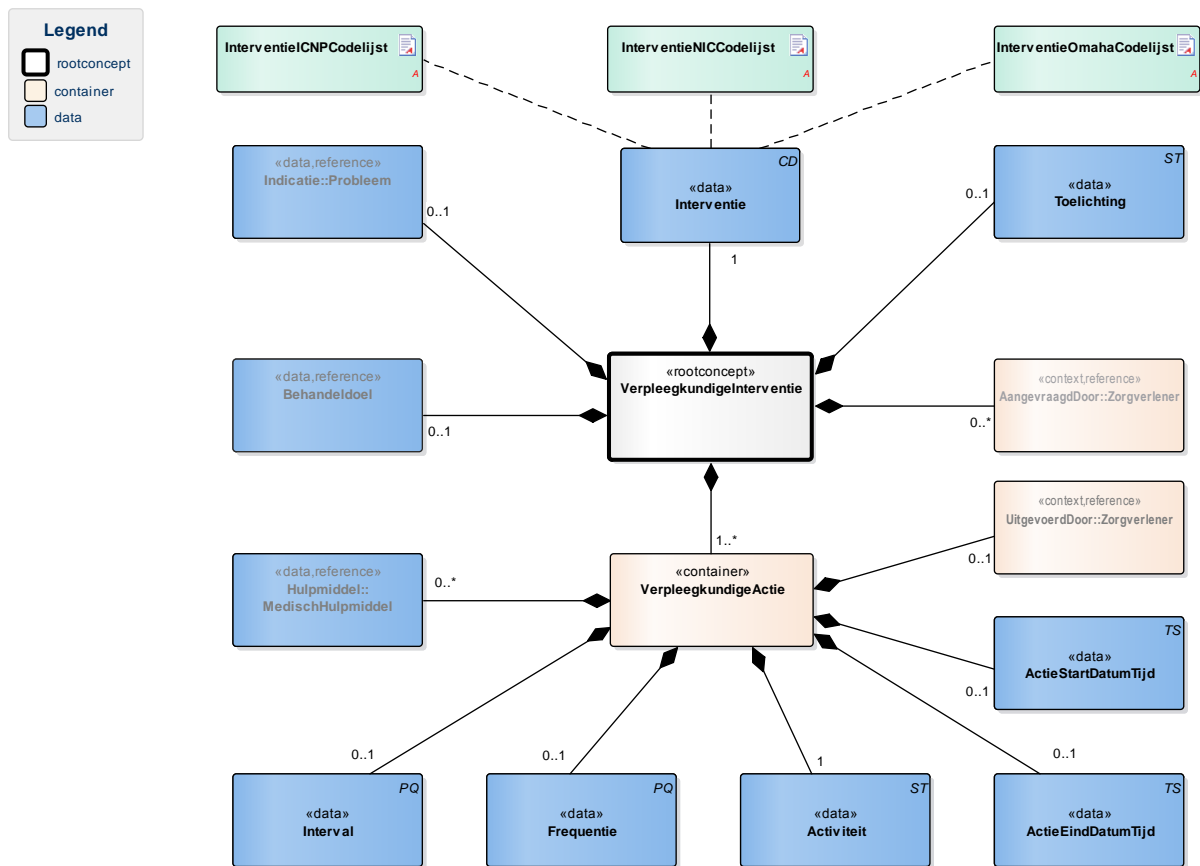

1.5 Patient Population

1.6 Evidence Base

Various classifications can be used in an organization to support the nursing process (nursing diagnoses/ symptoms, interventions and healthcare results). The chosen classification system usually depends on the context of the care (and the accessibility of the classification). Commonly used systems include Omaha System, NANDA, NIC and NOC (also known as the NNN-classification) and ICF.

1.7 Information Model

«rootconcept»	VerpleegkundigeInterventie	
Definitie	Root concept of the NursingIntervention information model. This root concept contains all data elements of the NursingIntervention information model.	
Datatype		
DCM::DefinitionCode	NL-CM:14.2.1	
Opties		

«data»	Interventie	
Definitie	A nursing intervention is a treatment carried out by a nurse based on an expert opinion and clinical knowledge for the benefit of the person requesting healthcare. The intervention is targeted towards a certain problem (diagnosis) and has a predetermined healthcare result. There are different classifications that describe interventions, including the NIC (National Intervention Classification) and the Omaha System. This information model uses coded interventions.

Opties		

«data»	Indicatie::Probleem	
Definitie	The nursing-related problem (indication) providing cause for the intervention.	
Datatype		
DCM::DefinitionCode	NL-CM:14.2.6	
DCM::ReferencedDefinitionCode	NL-CM:5.1.2	This is a reference to concept Probleem in information model OverdrachtConcern.
Opties		

«data»	Behandeldoel	
Definitie	The description of the treatment goal that the intervention decision is based on.	
Datatype		
DCM::DefinitionCode	NL-CM:13.4.7

«container»	VerpleegkundigeActie	
Definitie	Container of the NursingProcedure concept. This container contains all data elements of the NursingProcedure concept.	
Datatype		
DCM::DefinitionCode	SNOMED CT: 9632001 Nursing procedure	
DCM::DefinitionCode	NL-CM:14.2.9	
Opties		

«data»	Interval	
Definitie	Interval indicates the time between planned procedures. When entering an interval, the focus is on the time between the consecutive procedures, such as in the treatment of a wound, for example. The exact times are of lesser importance.	
Datatype	PQ	
DCM::DefinitionCode	NL-CM:14.2.3	
Opties		

«data»	Frequentie	
Definitie	The frequency describes how often and in which period certain procedures are carried out, e.g. 3x a day.	
Datatype	PQ	
DCM::DefinitionCode	NL-CM:14.2.4	
Opties		

«data»	Activiteit	
Definitie	The description of nursing procedures carried out in the care for a patient. A nursing intervention consists of a set of patient-related nursing procedures.	
Datatype	ST	
DCM::DefinitionCode	NL-CM:14.2.10	
Opties		

«data»	ActieStartDatumTijd	
Definitie	The start date (and if possible start time) of the procedure. The concept offers the option to indicate the start of the period of a series of repeating procedures.	
Datatype	TS	
DCM::DefinitionCode	NL-CM:14.2.11	
DCM::ExampleValue	20120605	
Opties		

«data»	ActieEindDatumTijd	
Definitie	The end date (and if possible end time) of the procedure. The concept
